The electrical system of A320 consist of 3-phase 115/200v 400hz constant frequency AC system and 28v DC system. Normally aircraft system produces AC current which is further transformed into DC current for certain applications/users. Three main generators which can supply whole AC electrical network independently - 2 Eng Gen and 1 Apu Gen.

If the source of the smoke is not found by troubleshooting the air conditioning system, we then go on to the electrical system, suspecting a possible electrical fire. If an electrical fire is suspected it is important to reduce the loads on the aircraft electrical system. In such a scenario, the Airbus A320 smoke checkli

Airbus A320 Series Electrical System. Electrical System Presentation. There are two identical engine driven generators called Integrated Drive Generators (IDG). They are used as the main power source to supply the A/C electrical network. The IDG basically contains, in a common housing, a generator and a Constant Speed Drive (CSD).

The Airbus A320 (certified in early 1988) is the first example of a second generation of civil electrical flight control aircraft, rapidly followed by the A340 aircraft (certified at the end of 1992). These aircraft benefit from the significant experience gained by Aérospatiale in the technologies used for a fly-by-wire system (see Table 12.1).

A380: 'More Electric' Aircraft - Aviation Today

This paper deals with the digital electrical flight control system of the Airbus A320/A330/A340. The A320 was the first civil aircraft equipped with such a system. It was certified and entered into service in the first quarter of 1988. The A330 and A340 have identical systems, closely related to the A320 system.
