Etymology and terminology. Fabricius coined the term Odonata from the Ancient Greek ὀδών odón (Ionic form of ὀδοῦς odoús) 'tooth' apparently because they have teeth on their mandibles, even though most insects also have toothed mandibles.. The word dragonfly is also sometimes used to refer to all Odonata, but odonate is a more correct English name for the group as a whole.

Metaphors in biology are often encountered in the description of cell structure and function. Describing the cell as a “city” is a case in point as it offers a good opportunity to get students thinking about the structural and functional details of their knowledge as well as to require them to “think outside the box.”
